About me

Full Stack Engineer with 3 years of experience building scalable enterprise applications using Python backend systems and React/TypeScript frontends. Experienced in designing REST APIs, microfrontend architectures, real-time notification systems, caching layers, and cloud-native deployments on AWS. Currently working on LLM and AI integrations, including autonomous AI agents, RAG-based knowledge retrieval, semantic search, vector embeddings, and prompt-driven workflow automation. Strong focus on performance, code quality, system design, and product delivery.

Experience

Software Engineer, JP Morgan Chase and Co. – Bengaluru, India

June 2023 – Present

- Architected autonomous AI agents using Google Agent Development Kit and Claude models via AWS Bedrock, creating sub-agents for workflow automation, multi-turn reasoning, and task execution within the AI marketing platform.
- Built a scalable RAG-based knowledge base using OpenSearch, vector embeddings, and semantic search to enable accurate retrieval of domain-specific marketing and campaign information.
- Integrated Postgres as long-term memory for AI agents, enabling persistent context retrieval and session-aware reasoning across user interactions.
- Applied prompt engineering techniques and integrated LLM APIs to automate creative review tasks including grammar correction, content validation, compliance checks, and creative comparison.
- As one of three founding engineers of the campaign platform team, designed and built a microfrontend system using React and TypeScript to enable campaign creation, now serving 800+ daily active users.
- Designed and implemented REST APIs and backend services for ticketing workflows using FastAPI and Pydantic.
- Implemented Redis caching for frequently accessed offer/product data, reducing average API response time by approximately 35% and significantly lowering database query load.
- Built a real-time notification system using WebSockets and Kafka for campaign status updates, improving visibility across campaign lifecycle events.
- Deployed containerized microservices on AWS ECS Fargate, RDS Aurora Postgres, and OpenSearch using Environment-as-Code (an internal Terraform wrapper).
- Managed state with Recoil, Redux, and Context; authored UI tests using React Testing Library and Jest, and backend tests using Pytest.
- Mentored interns and contributed to design reviews across the campaign platform team.

Software Engineer Intern, JP Morgan Chase and Co. – Bengaluru, India

Feb 2023 – June 2023

- Built a game-character management app with a React frontend and Java Spring Boot backend, using REST API.
- Integrated WebSockets for event-driven messaging and improved system scalability and responsiveness.
- Utilized PostgreSQL for structured data storage and optimized schema design for dynamic character data.

Certifications and Achievements

- AWS Cloud Practitioner (Nov 2023) – [Certificate Link](#)
- Recognized as Goal Achiever for Q3 and Q4 2025 at JP Morgan Chase for consistent and high-impact contributions.
- Among top 5 teams at Unfold'22 Hackathon by CoinDCX x Devfolio.

Technologies

Languages/AI: JavaScript, TypeScript, Python, Java, SQL, Google ADK, RAG, Prompt Engineering, LangChain

Frontend: React, Next.js, HTML, CSS, NPM, Recoil, Jotai, AG-Grid, Webpack, React Testing Library

Backend: FastAPI, Pydantic, asyncio, PostgreSQL, Redis, Kafka, REST APIs, GraphQL, JWT/OAuth

Cloud/DevOps: AWS (ECS, S3, Aurora Postgres, OpenSearch, Bedrock), Terraform, CI/CD, GitHub, Bitbucket

Testing/Tools: Pytest, Jest, Mocha, GitHub Copilot, Claude Code

Education

VIT Bhopal University, B.Tech in Computer Science and Engineering GPA: 8.97

June 2019 – June 2023
